

Do we have adequate human resources, funding, equipment?

How many partnerships have we established?

How many HIV/AIDS clinical trainings have we held?

Outputs

How many health workers have we trained?

How many HIV+ patients are receiving ART?

Outcome

To what extent are the partnerships sustainable?

Did human and/or organizational capacity improve?

Has the quality of ART services improved?

Impact

Are HIV+ patients receiving ART (through the TC project) living longer?

Has HIV/AIDS morbidity decreased in TC project areas?

Information drawn from routine data collection tools:
Patient records, program reports, financial statements, etc.

Program Monitoring

Information drawn from assessments, studies and surveys conducted on ad hoc basis (baseline, mid-term, end-of-project)

Program Evaluation
